Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

- 1-11. (Canceled)
- 12. (Previously Presented) Optical recording medium comprising an active layer made of inorganic material, presenting a front face for receiving an optical radiation during writing operations, and a rear face wherein the inorganic material is a tellurium and zinc alloy consisting of an atomic percentage of between 60% and 70% of zinc and between 30% and 40% of tellurium.
- 13. (Currently Amended) Recording medium according to claim 12, wherein the alloy comprises inorganic material is a tellurium and zinc alloy consisting of an atomic percentage of 65% of zinc and 35% of tellurium.
- 14. (Previously Presented) Recording medium according to claim 12, wherein the active layer has a thickness comprised between 15 nanometers and 50 nanometers.
- 15. (Previously Presented) Recording medium according to any claim 12, comprising a semi-reflecting layer arranged on the front face of the active layer and having a thickness comprised between 4 nanometers and 10 nanometers.
- 16. (Currently Amended) Recording medium according to claim 15, wherein the semi-reflecting layer is made of metal selected from the group consisting of an atomic percentage of aluminium aluminum, gold, silver, copper, zinc, titanium, nickel and alloys thereof.
 - 17.-19. (Canceled)
- 20. (Previously Presented) Recording medium according to claim 12, comprising a protective layer of polymer material on the rear face.

- 21. (Previously Presented) Recording medium according to claim 20, wherein the protective layer is polydimethylsiloxane-based and has a thickness comprised between 10 micrometers and 100 micrometers.
- 22. (Previously Presented) Recording medium according to claim 20, wherein the protective layer is deformable.
